## Description

ALDH1A1 belongs to the aldehyde dehydrogenases family of proteins. Aldehyde dehydrogenase is the second enzyme of the major oxidative pathway of alcohol metabolism. Two major liver isoforms of this enzyme, cytosolic and mitochondrial, can be distinguished by their electrophoretic mobilities, kinetic properties, and subcellular localizations. Most Caucasians have two major isozymes, while approximately 50% of Orientals have only the cytosolic isozyme, missing the mitochondrial isozyme. A remarkably higher frequency of acute alcohol intoxication among Orientals than among Caucasians could be related to the absence of the mitochondrial isozyme.

## Application Notes

Titration of the ALDH1A1 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

## Immunogen

This ALDH1A1 antibody was produced from rabbits immunized with human ALDH1A1 recombinant protein.

## Storage

Aliquot the ALDH1A1 antibody and store frozen at -20°C or colder. Avoid repeated freeze-thaw cycles.
