Description

Amyloid-beta Precursor Protein functions as a cell surface receptor and performs physiological functions on the surface of neurons relevant to neurite growth, neuronal adhesion and axonogenesis. Interaction between APP molecules on neighboring cells promotes synaptogenesis. [UniProt]

Application Notes

Optimal dilution of the APP antibody should be determined by the researcher.

Immunogen

A synthetic peptide specific to human Amyloid-beta Precursor Protein was used as the immunogen for the APP antibody.

Storage

Store the APP antibody at -20oC.
