Description

Bromodomain-containing protein 7 is a protein that in humans is encoded by the BRD7 gene. This gene encodes a protein which is a member of the bromodomain-containing protein family. The product of this gene has been identified as a component of one form of the SWI/SNF chromatin remodeling complex, and as a protein which interacts with p53 and is required for p53-dependent oncogene-induced senescence which prevents tumor growth. Pseudogenes have been described on chromosomes 2, 3, 6, 13 and 14. Alternative splicing results in multiple transcript variants.

Application Notes

Optimal dilution of the BRD7 antibody should be determined by the researcher.

Immunogen

A recombinant human protein corresponding to amino acids T514-R567 was used as the immunogen for the BRD7 antibody.

Storage

After reconstitution, the BRD7 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
