#### **Description**

Involved in the activation cascade of caspases responsible for apoptosis execution. At the onset of apoptosis it proteolytically cleaves poly(ADP-ribose) polymerase (PARP) at a '216-Asp-|-Gly-217' bond. Cleaves and activates sterol regulatory element binding proteins (SREBPs) between the basic helix-loop-helix leucine zipper domain and the membrane attachment domain. Cleaves and activates caspase-6, -7 and -9. Involved in the cleavage of huntingtin. Triggers cell adhesion in sympathetic neurons through RET cleavage.

### **Application Notes**

Titration of the Caspase-3 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

### **Immunogen**

Purified His-tagged protein was used to produced this monoclonal Caspase-3 antibody.
