

## CD20 Antibody [clone SPM494] (V2397)

| Catalog No.  | Formulation                                                  | Size   |
|--------------|--------------------------------------------------------------|--------|
| V2397-0.5ML  | Bioreactor concentrate with 0.05% sodium azide               | 0.5 ml |
| V2397-0.1ML  | Bioreactor concentrate with 0.05% sodium azide               | 0.1 ml |
| V2397IHC-7ML | Prediluted in 1X PBS, 0.05% sodium azide; *For IHC use only* | 7 ml   |

| <b>Applications</b>       | Flow Cytometry : 2-5ul/10 <sup>6</sup> cells<br>Immunofluorescence : 1:100-1:200<br>Immunohistochemistry (FFPE) : 1:100-1:200 for 30 min at RT |
| <b>Limitations</b>        | This CD20 antibody is available for research use only.                                                                                         |

IHC testing of CD20 antibody and FFPE human lymphoma tissue (clone SPM494).

Flow cytometry testing of human Raji cells with CD20 antibody (clone SPM494); Red=isotype control, Blue= CD20 antibody.

Immunofluorescent staining of human MOLT-4 cells with CD20 antibody (green, clone SPM494) and Reddot nuclear stain (red).

## Description

This antibody recognizes a protein of 33-37kDa, identified as CD20. The epitope is similar to or identical to that recognized by other CD20 antibodies including Leu-16 and B1. This antibody can be used for immunophenotyping of leukemia and malignant cells, B lymphocyte detection in peripheral blood, Bcell localization in tissues and B lymphocyte purification by immunosorbent methods. CD20 is a non-Ig differentiation antigen of B-cells and its expression is restricted to normal and neoplastic B-cells, being absent from all other leukocytes and tissues. It is expressed by pre Bcells and persists during all stages of B-cell maturation but is lost upon terminal differentiation into plasma cells. Protein passes through the membrane 4 times with both ends in cytoplasm and exposes one short and one longer loop to the external environment. CD20 is not glycosylated in resting B-cells and its cytoplasmic domains are differentially phosphorylated upon activation. It acts as a calcium channel involved in B-cell activation and cell cycle progression.

## Application Notes

The concentration stated for each application is a general starting point. Variations in protocols, secondaries and substrates may require the CD20 antibody to be titrated up or down for optimal performance.

1. Staining of formalin-fixed tissues requires boiling tissue sections in pH 9 10mM Tris with 1mM EDTA for 10-20 min followed by cooling at RT for 20 minutes.
2. The prediluted format is supplied in a dropper bottle and is optimized for use in IHC. After epitope retrieval step (if required), drip mAb solution onto the tissue section and incubate at RT for 30 min.

## Immunogen

Human tonsil B cells were used as the immunogen for this CD20 antibody.

## Storage

CD20 antibody with azide can be stored at 2-8oC. The azide-free format should be aliquoted and stored at -20oC or colder.
