Description

CD74 is a type II transmembrane protein which binds to the peptide binding groove of newly synthesized MHC class II alpha/beta heterodimers and prevents their premature association with endogenous polypeptides.

Application Notes

Optimal dilution of the CD74 antibody should be determined by the researcher.

Immunogen

A recombinant fragment of human CD74 protein was used as the immunogen for the CD74 antibody.

Storage

Aliquot the CD74 antibody and store frozen at -20°C or colder. Avoid repeated freeze-thaw cycles.
