Description

Cyclin-Dependent Kinase 1 is a member of the Ser/Thr protein kinase family. This protein is a catalytic subunit of the highly conserved protein kinase complex known as M-phase promoting factor (MPF), which is essential for G1/S and G2/M phase transitions of eukaryotic cell cycle. Mitotic cyclins stably associate with this protein and function as regulatory subunits. The kinase activity of this protein is controlled by cyclin accumulation and destruction through the cell cycle. The phosphorylation and dephosphorylation of this protein also play important regulatory roles in cell cycle control. [RefSeq]

Application Notes

Titering of the CDK1 antibody may be required for optimal performance.

Immunogen

Recombinant human protein was used as the immunogen for the CDK1 antibody.

Storage

Store the CDK1 antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
