Description

Keratins are a family of intermediate filament proteins that assemble into filaments through forming heterodimers of one type I keratin (keratins 9 to 23) and one type II keratin (keratins 1 to 8). Keratins demonstrate tissue and differentiation specific expression profiles. Cytokeratin 1 is a hetero-tetramer of two type I as well as two type II keratins, keratin-10 (KRT10). Keratin 1 is differentiation specific keratin that is one of the predominant keratins in suprabasal keratinocytes in stratified epithelia. Mutations in keratin 1 cause epidermolytic hyperkeratosis.

Application Notes

Optimal dilution of the Cytokeratin 1 antibody should be determined by the researcher.

Immunogen

Amino acids VRFVSTSYSGVTR from the C-terminal portion of the protein was used as the immunogen for this Cytokeratin 1 antibody.

Storage

Store the Cytokeratin 1 antibody at 2-8°C (with azide) or aliquot and store at -20°C or colder (without azide).
