Description

Transcription repressor. Involved in the axonal projection and proper termination of olfactory sensory neurons (OSN). Plays a role in rostro-caudal patterning of the diencephalon and in prethalamic formation. Expression is required in OSN to cell-autonomously regulate OSN axon projections. Regulates non-cell-autonomously the layer formation of the olfactory bulb development and the interneurons. May be required for correct rostral migration of the interneuron progenitors (By similarity).

Application Notes

Titration of the FEZF1 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 67-96 from the human protein was used as the immunogen for this FEZF1 antibody.

Storage

Aliquot the FEZF1 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
