Description

Transcription repressor. Required for the specification of corticospinal motor neurons and other subcerebral projection neurons. May play a role in layer and neuronal subtype-specific patterning of subcortical projections and axonal fasciculation. Controls the development of dendritic arborization and spines of large layer V pyramidal neurons. May be involved in innate immunity (By similarity).

Application Notes

Titration of the FEZF2 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 209-237 from the human protein was used as the immunogen for this FEZF2 antibody.

Storage

Aliquot the FEZF2 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
