Description

Interferon-induced guanylate-binding protein 2 is a protein that in humans is encoded by the GBP2 gene. This gene belongs to the guanine-binding protein (GBP) family, which includes interferon-induced proteins that can bind to guanine nucleotides (GMP, GDP and GTP). The encoded protein is a GTPase which hydrolyzes GTP, predominantly to GDP. The protein may play a role as a marker of squamous cell carcinomas.

Application Notes

Optimal dilution of the Gbp2 antibody should be determined by the researcher.

Immunogen

An E. coli-derived mouse protein (amino acids R181-L589) was used as the immunogen for the Gbp2 antibody.

Storage

After reconstitution, the Gbp2 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
