Description

Recognizes a protein of 20-25kDa, identified as human interferon. This mAb is specific to human IFN γ and recognizes both recombinant and native human IFN γ . T lymphocytes and NK cells mainly produce IFN γ . It is a pleiotropic cytokine involved in the regulation of nearly all phases of immune and inflammatory responses, including the activation, growth and differentiation of T cell, B cells, macrophages, NK cells and other cell types such as endothelial cells and fibroblasts. It has weak anti-viral and anti-proliferative activity, and potentiates the antiviral and anti-tumor effects of IFN α /b (type I interferon).

Application Notes

Optimal dilution of the IFN gamma antibody should be determined by the researcher.

Immunogen

Human recombinant protein was used as the immunogen for the IFN gamma antibody.

Storage

Store the IFN gamma antibody at 2-8°C (with azide) or aliquot and store at -20°C or colder (without azide).
