Description

The CHUK gene encodes a member of the serine/threonine protein kinase family. The encoded protein, a component of a cytokine-activated protein complex that is an inhibitor of the essential transcription factor NF-kappa-B complex, phosphorylates sites that trigger the degradation of the inhibitor via the ubiquitination pathway, thereby activating the transcription factor. Application Notes

Optimal dilution of the IKK alpha antibody should be determined by the researcher.

Immunogen

A synthetic peptide specific to human IKK alpha / CHUK was used as the immunogen for the IKK alpha antibody.

Storage

Store the IKK alpha antibody at -20oC.
