## Description

This gene encodes the regulatory subunit of the inhibitor of kappaB kinase (IKK) complex, which activates NF-kB resulting in activation of genes involved in inflammation, immunity, cell survival, and other pathways. Mutations in this gene result in incontinentia pigmenti, hypohidrotic ectodermal dysplasia, and several other types of immunodeficiencies. Multiple transcript variants encoding different isoforms have been found for this gene. A pseudogene highly similar to this locus is located in an adjacent region of the X chromosome.

## Application Notes

Titration of the IKK gamma antibody may be required due to differences in protocols and secondary/substrate sensitivity.

## **Immunogen**

This IKK gamma antibody was raised using purified His-tagged recombinant full length human IKKg.

## **Storage**

Aliquot the IKK gamma antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
