Description

IRF2 encodes interferon regulatory factor 2, a member of the interferon regulatory transcription factor (IRF) family. IRF2 competitively inhibits the IRF1-mediated transcriptional activation of interferons alpha and beta, and presumably other genes that employ IRF1 for transcription activation. However, IRF2 also functions as a transcriptional activator of histone H4. [provided by RefSeq].

Application Notes

Titration of the IRF2 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 225-255 from the human protein was used as the immunogen for this IRF2 antibody.

Storage

Aliquot the IRF2 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
