Description

'Lysine (K) specific demethylase 4A' (KDM4A) is a histone demethylase that specifically demethylates 'Lys-9' and 'Lys-36' residues of histone H3, thereby playing a central role in histone code. Does not demethylate histone H3 'Lys-4', H3 'Lys-27' nor H4 'Lys-20'. Demethylates trimethylated H3 'Lys-9' and H3 'Lys-36' residue, while it has no activity on mono- and dimethylated residues.

Application Notes

Optimal dilution of the KDM4A antibody should be determined by the researcher.

Immunogen

A synthetic peptide specific to human KDM4A was used as the immunogen for the KDM4A antibody.

Storage

Store the KDM4A antibody at -20oC.
