Description

L1TD1 is an RNA-binding protein highly and specifically expressed in pluripotent cells. It is essential for maintaining the pluripotency in human embryonic stem cells (hESCs) and has been considered as a marker for undifferentiated hESCs. L1TD1 is also reported to be highly expressed in medulloblastoma cells and its expression in medulloblastoma correlates with poor clinical outcome.

Application Notes

Optimal dilution of the L1TD1 antibody should be determined by the researcher.

Immunogen

An E.coli-derived human recombinant protein (D34-H852) was used as the immunogen for the L1TD1 antibody.

Storage

After reconstitution, the L1TD1 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
