Description

Matrix metalloproteinase 9, or 92 kDa type IV collagenase, is part of a family of proteins involved in the breakdown of extracellular matrix in normal physiological processes. Most MMPs are secreted as inactive proproteins which are activated when cleaved by extracellular proteinases. MMP9 degrades type IV and V collagens.

Application Notes

Optimal dilution of the MMP9 antibody should be determined by the researcher.

Immunogen

Amino acids KALLFSKGRVWRFDLKSQKVDPQSVIRVDKEF of mouse MMP9 were used as the immunogen for the MMP9 antibody.

Storage

After reconstitution, the MMP9 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
