Description

PCSK9 is a proprotein convertase belonging to the proteinase K subfamily of the secretory subtilase family. This protein is synthesized as a soluble zymogen that undergoes autocatalytic intramolecular processing in the endoplasmic reticulum. The protein may function as a proprotein convertase. The protein plays a role in cholesterol homeostasis and may have a role in the differentiation of cortical neurons.

Application Notes

Titration of the PCSK9 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 144-173 from the human protein was used as the immunogen for this PCSK9 antibody.

Storage

Aliquot the PCSK9 antibody and store frozen at -20°C or colder. Avoid repeated freeze-thaw cycles.
