Description

OCT4/POU5F1 is a member of the POU family of transcription factors, involved in the regulation of pluripotency during normal development and is detectable in embryonic stem and germ cells. It is a key regulator of self-renewal in embryonic stem cells; its expression is potentially correlated with tumorigenesis and can affect tumor recurrence or resistance to therapies. OCT4/POU5F1 is expressed in undifferentiated pluripotent cells, germ cells in ovary and testis.

Application Notes

Optimal dilution of the POU5F1 antibody should be determined by the researcher.

Immunogen

Recombinant fragment from the human protein was used as the immunogen for the POU5F1 antibody.

Storage

Aliquot the POU5F1 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
