Description

PSMB9 is a member of the proteasome B-type family, also known as the T1B family, that is a 20S core beta subunit. The proteasome is a multicatalytic proteinase complex which is characterized by its ability to cleave peptides with Arg, Phe, Tyr, Leu, and Glu adjacent to the leaving group at neutral or slightly basic pH. The proteasome has an ATP-dependent proteolytic activity. This subunit is involved in antigen processing to generate class I binding peptides.

Application Notes

The stated application concentrations are suggested starting points. Titration of the PSMB9 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 193-219 from the human protein was used as the immunogen for the PSMB9 antibody.

Storage

Aliquot the PSMB9 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
