| Localization | Nuclear |
| Applications | Immunohistochemistry (FFPE): 1-2ug/ml for 30 minutes at RT |
| Limitations | This recombinant c-Myc antibody is available for research use only. |

IHC staining of FFPE human cervical carcinoma with recombinant c-Myc antibody. HIER: boil tissue sections in pH 9 10mM Tris with 1mM EDTA for 20 min and allow to cool before testing.

SDS-PAGE analysis of purified, BSA-free recombinant c-Myc antibody as confirmation of integrity and purity.

Description

It recognizes a transcription factor of 64-67kDa, identified as c-myc. This MAb shows no cross-reaction with v-myc. c-myc is involved in the control of cell proliferation and differentiation and is amplified and/or overexpressed in a variety of tumors. Over-expression of c-myc protein occurs frequently in luminal cells of prostate intraepithelial neoplasia as well as in most primary carcinomas and metastatic disease.

Application Notes

Optimal dilution of the recombinant c-Myc antibody should be determined by the researcher.

Immunogen

Amino acids AEEQKLISEEDLLRKRREQLKHKLEQLRNSCA from C-terminus of the human protein was used as the immunogen for the recombinant c-Myc antibody.

Storage

Store the recombinant c-Myc antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
