Description

PD-L1 is a checkpoint regulator in immune cells, it is expressed on immune or non-hematopoietic cells. Expression of the protein is seen during pregnancy where it has a role in suppressing the immune system. PD-L1 induces an inhibitory signal in activated T-cells and promotes T-cell apoptosis. It is overexpressed in a number of different cancers where it is believed to play a significant role in the cancer's ability to evade the immune system.

Application Notes

Optimal dilution of the recombinant PD-L1 antibody should be determined by the researcher.

Immunogen

A linear peptide specific to human PD-L1 was used as the immunogen for the recombinant PD-L1 antibody.

Storage

Store the recombinant PD-L1 antibody at 2-8°C (with azide) or aliquot and store at -20°C or colder (without azide).
