Description

It recognizes a 170kDa protein, which is identified as topoisomerase IIAlpha. It shows no cross-reaction with Topoisomerase II beta or I. Topo II Alpha plays important roles in synthesis and transcription of DNA as well as chromosomal segregation during mitosis. It is reported to be a sensitive and specific marker of late S-, G2- & M-phases in

transformed and developmentally regulated normal cells. Topo II Alpha is also implicated in drug resistance of tumor cells and has been shown to be over-expressed in many human cancers. Decreased expression of Topo IIa is the predominant mechanism of resistance to several chemotherapeutic agents.

Application Notes

Optimal dilution of the recombinant TOP2A antibody should be determined by the researcher.

Immunogen

A recombinant human Topoisomerase II alpha protein fragment (aa1300-1500) was used as the immunogen for the recombinant TOP2A antibody.

Storage

Aliquot the recombinant TOP2A antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
