

# RIP1 Antibody / RIPK1 (R31540)

Catalog No.	Formulation	Size
R31540	0.5mg/ml if reconstituted with 0.2ml sterile DI water	100 ug

## **Bulk quote request**

Availability	1-3 business days
Species Reactivity	Human
Format	Antigen affinity purified
Clonality	Polyclonal (rabbit origin)
Isotype	Rabbit IgG
Purity	Antigen affinity
Buffer	Lyophilized from 1X PBS with 2.5% BSA and 0.025% sodium azide
UniProt	Q13546
Applications	Western Blot : 0.5-1ug/ml
Limitations	This RIP1 antibody is available for research use only.

Western blot testing of human 1) PANC1, 2) SKOV-3 and 3) HeLa cell lysate (50ug/lane) with RIP1 antibody at 0.5ug/ml. Predicted molecular weight ~76 kDa.

#### **Description**

RIPK1, also known as RIP or RIP1, is an enzyme that in humans is encoded by the RIPK1 gene. It is mapped to 6p25.2. RIPK1 is a key signaling molecule in the programmed necrosis pathway, which plays important roles in development, tissue damage response, and antiviral immunity. RIPK1 is known to have function in a variety of cellular pathways including the NF-kB pathway and programmed necrotic cell death (necroptosis). The kinase domain, while important for necroptotic (programmed necrotic) functions, it appears dispensable for other lethal, as well as pro-survival roles. Also, proteolytic processing of RIPk1, through both caspase-dependent and -independent mechanisms, triggers lethality that is dependent on the generation of one or more specific C-terminal cleavage product(s) of RIPk1 upon stress.

#### **Application Notes**

The stated application concentrations are suggested starting amounts. Titration of the RIP1 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

#### **Immunogen**

Human partial recombinant protein (AA 316-671) was used as the immunogen for this RIP1 antibody.

### **Storage**

After reconstitution, the RIP1 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
