Description

Receptor for the lysosphingolipid sphingosine 1-phosphate (S1P). S1P is a bioactive lysophospholipid that elicits diverse physiological effect on most types of cells and tissues. This inducible epithelial cell G-protein-coupled receptor may be involved in the processes that regulate the differentiation of endothelial cells. Seems to be coupled to the G(i) subclass of heteromeric G proteins.

Application Notes

Titration of the S1pr1 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 311-335 from the zebrafish protein was used as the immunogen for this S1pr1 antibody.

Storage

Aliquot the S1pr1 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
