Description

Semaphorin 4D (Sema 4D) is an axon guidance molecule which is secreted by oligodendrocytes and induces growth cone collapse in the central nervous system. By binding plexin B1 receptor it functions as an R-Ras GTPase-activating protein (GAP) and repels axon growth cones in both the mature central nervous system. [Wiki]

Application Notes

Optimal dilution of the SEMA4D antibody should be determined by the researcher.

Immunogen

A synthetic peptide derived from human Semaphorin 4D was used as the immunogen for the SEMA4D antibody.

Storage

Store the SEMA4D antibody at -20oC.
