Description

Tom1 (target of Myb 1) is a 492 amino acid cytoplasmic protein that belongs to the Tom1 family. Widely expressed with highest expression in heart, liver, placenta and skeletal muscle, Tom1 is thought to be involved in intracellular trafficking and may be associated with the translocation of ubiquitinated proteins to early endosomes for degradation. Tom1 contains one GAT domain and one VHS domain through which it interacts and complexes with proteins such as Tollip and endofin (also known as SARA). These interactions recruit Tom1 to the endosome, allowing it to participate in the endosomal trafficking of ubiquitin-tagged proteins.

Application Notes

Optimal dilution of the TOM1L1 antibody should be determined by the researcher.

Immunogen

Recombinant full-length human TOM1L1 protein was used as the immunogen for the TOM1L1 antibody.

Storage

Aliquot the TOM1L1 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
