Description

Contributes to histone modification. May position the N- terminus of histone H3 for efficient trimethylation at 'Lys-4'. As part of the MLL1/MLL complex it is involved in methylation and dimethylation at 'Lys-4' of histone H3. H3 'Lys-4' methylation represents a specific tag for epigenetic transcriptional activation. As part of the NSL complex it may be involved in acetylation of nucleosomal histone H4 on several lysine residues. May regulate osteoblasts differentiation.

Application Notes

Titration of the WDR5 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

This WDR5 antibody was produced from a rabbit immunized with a KLH conjugated synthetic peptide between 321-354 amino acids from human WDR5.

Storage

Aliquot the WDR5 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
